

Want to influence the future of healthcare?

CDS Summer App Challenge 2017

We invite you to model a clinical decision support app that could contribute to tomorrow's healthcare delivery. The challenge is to transform an idea or clinical concept into a demonstrable CDS application.

Clinical Decision Support applications (CDS apps) assist medical practitioners in making healthcare-related decisions under specific clinical circumstances. CDS apps analyze healthcare data at the point of care and deliver personalized recommendations that improve the safety, quality and efficiency of healthcare delivery.

WHAT'S IN IT FOR YOU?

- Learn to develop CDS applications from the industry-leading modelling team
- Make an immediate contribution to the enhancement of healthcare through open source
- Translate your CDS apps with ease and share them internationally
- Receive a certificate that endorses your clinical modelling skills
- Demonstrate your work for the CDS team at Cambio Healthcare Systems
- Get the chance to interview for a position on the team
